Wigton, UK

Industry: Healthcare

“We have been delighted with the flexibility AnyChart has provided us with. All of our clients comment on how well it allows data to be visualized.”

– Mark Irving,  
Director, Auditr

“The great thing about AnyChart is how simple it has been to embed within our software. It’s a great tool for developers to work with.”

– Tony Irving,  
Software Developer, Auditr

### Auditr Chooses AnyChart to Visualize Healthcare Data

Auditr is an online, totally web-based service designed specially for hospitals and healthcare organizations. It helps to provide assurance, get early warning of potential problems, and improve performance. With Auditr, users can collect data, report and discuss the results, develop and monitor action plans. Auditr is developed by Internet Learning Ltd, a company that previously built learning management systems used in the field of healthcare.

#### Challenge:

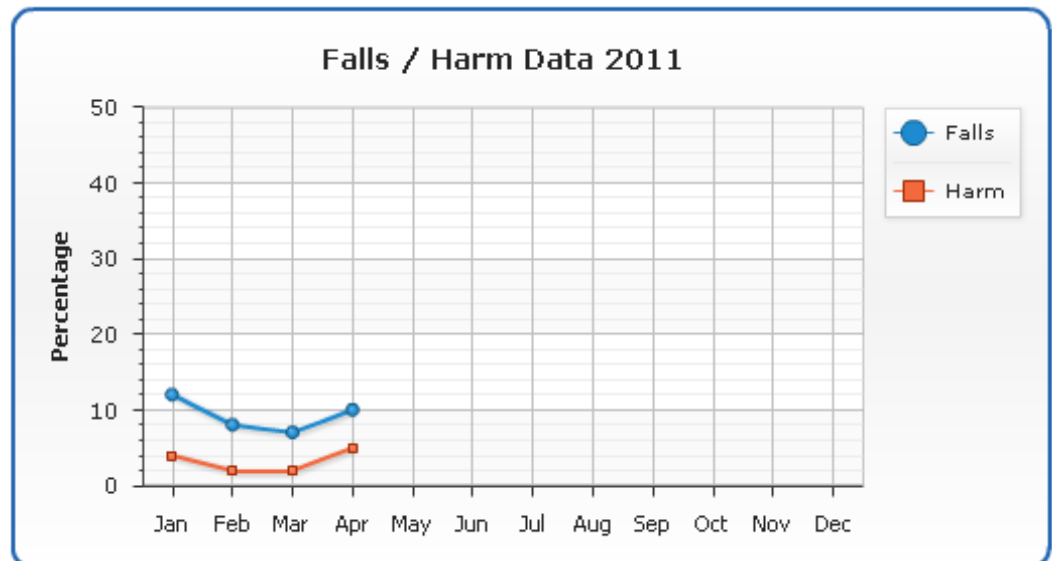

- To visualize time-based and statistical data for reports in the form of line, bar, meters and heatmap charts.
- To make the charts interactive so that an end-user could proceed to more detailed information by clicking a particular point of a chart.

#### Solution:

- AnyChart was chosen for visualization. The component allows creating a wide variety of fully configurable charts, and all data is easily set in XML format.
- Using AnyChart's interactivity options, actions that should be performed when a user clicks a point on a chart were defined.

“AnyChart was perfect for us. We needed a solution that would be easy to integrate, intuitive for our clients and provide enough charting options to meet all of their needs. AnyChart has fitted the bill perfectly.”

– Ray Irving, Director, Auditr
