

AnyChart™

Data Visualization Solutions

Independent Data Services
www.idsdatanet.com
Aberdeen, United Kingdom
Kuala Lumpur, Malaysia

Industry:
Upstream Oil and Gas

“User reaction has been very positive to the clear interface available on-top of the AnyChart framework. The VisNet product includes a dashboard application which can fill a user's screen with common benchmarking. Clients are delighted to see their data so clearly and concisely onscreen.”

“As we have progressed with our development, we have pushed the boundaries of charts, and when this has occurred, a quick email to AnyChart's support staff has either changed our approach or caused us to pause to wait for a feature. Support has always been prompt and informative.”

“The documentation available on the site is very detailed and has meant that numerous questions about usage were answered without support interaction.”

— William Sellick, Senior Software Developer, IDS

IDS Chooses AnyChart for Its Reporting and Analysis Systems

Independent Data Services (IDS), founded in 1995, is the world's largest provider of web-based reporting and analysis services to the upstream oil and gas industry. IDS' latest release – DataNet2 – makes full use of Web 2.0-compliant technologies and WITSML feeds to capture and deliver data via the web to unlimited users. The DataNet2 suite of products includes VisNet – a back-end query engine which extracts knowledge from every part of the DataNet2 system.

Challenge:

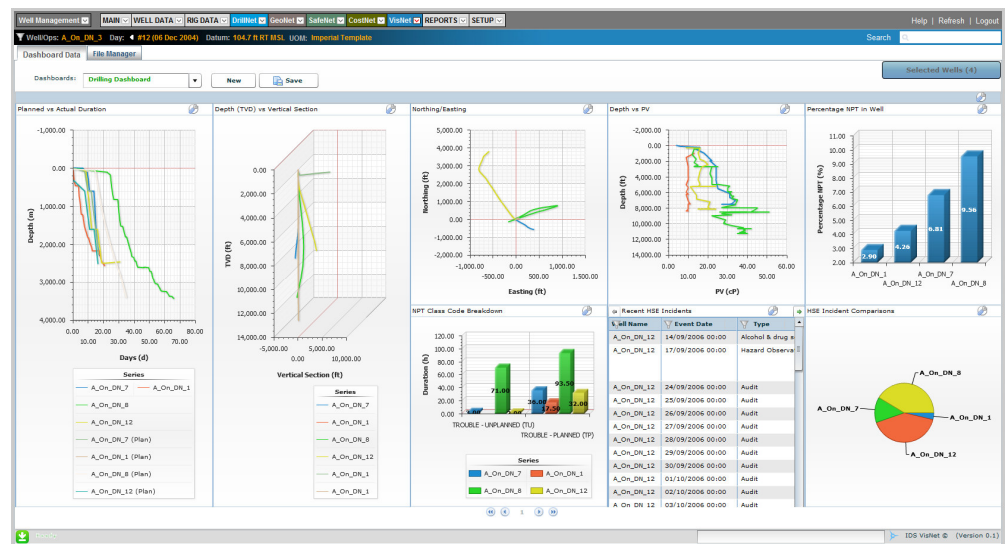

- To visualize the data returned by VisNet (KPI's, benchmarks) and create configurable and interactive charts.
- To ensure that all visualizations would be customizable, matching IDS' high standards.
- To implement a variety of charts.

Solution:

- AnyChart's charting technology was used to generate visualizations for VisNet. The solution allows for the creation of advanced and good-looking animated charts.
- The component is very flexible and provides a lot of features, which made it a good choice for IDS' project.
- The AnyChart library includes a wide range of charts which is constantly growing. Currently VisNet supports Bar, Column, Pie, Line, and Scatter graphs, but more will be added.

“AnyChart has a toolkit/framework that is very feature rich and provides a very refined solution to the visualization problem. Charts are clear, well rendered, and flexible.”

— William Sellick, Senior Software Developer, IDS
